Floating floors

Engineered Plank Floating Floors

A floating floor is the no mess, no fuss way to get a beautiful timber floor in your home - instantly. Transform your existing floor with the warmth and comfort of solid wood, without the hassle.

Easy Installation

A floating floor can be laid over most surfaces including particle board, timber and concrete as long as they are level, clean and dry.

The floor is installed on a foam underlay, which provides good noise insulation, making them ideal for use in multi-storey apartment buildings and homes. Engineered planks are manufactured with either a glue together system at the tongue and groove or a clip together format, requiring no glue at all.

An engineered plank floating floor is made up of a veneered solid timber top layer with a cross laminated plywood core and base. The cross ply construction limits movement of any one layer and ensures the floors stability. The top layer is coated with 6 coats of UV lacquer for maximum durability.

Easy Care

Floating floors are conveniently pre-finished and once installed, will provide you with a stunning new timber floor that you can walk on immediately. Floating floors

are easy to clean and require minimum maintenance; just a regular sweep with an electrostatic mop, soft broom or vacuum, and when necessary, a quick mop using QPCF Floor Cleaner with warm water and a well-wrung cotton mop. Floating floors can be sanded and recoated for a lifetime of good looks.

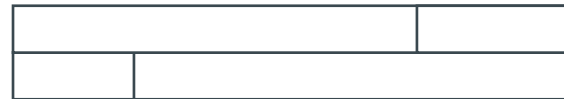

Timber is an environmentally renewable resource and its low allergen properties make it the ideal choice for all Australian floors.

Easy Style

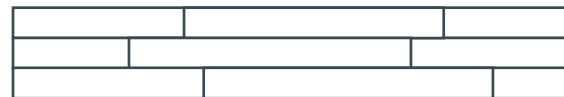

Floating floors come in a choice of 1 strip, 2 strip and 3 strip styles, each giving you a stunning finish.

1 Strip

2 Strip

3 Strip

Turn your floor into a beautiful floor – it's easy

Queensland Parquetry and Cork Floors Pty Ltd has been supplying and installing flooring products since 1978. We have a proud history of being innovative and providing an exceptional product and service to our customers.
